EXP.NO: 4	**Create a web form that accepts a user's name and age. Write a Servlet to process the form data and display it back on the browser.**
DATE:26/02/2025	

AIM:

To create a simple web application that includes a form to accept a user's name and age, and then use a Servlet to process the submitted data. The Servlet will retrieve the form data, process it, and display the values back on the browser.

ALGORITHM:

1. **Input:**
   - The user fills out a web form with their **name** and **age** and submits it.
2. **Form Handling and Servlet Processing:**
   1. **Create the Web Form:**
      - Create an HTML form with **two input fields**: one for the user's **name** and one for the user's **age**.
      - Add a **submit button** to the form.
      - Set the form's action attribute to the URL of the **Servlet** and the method to POST (or GET).
   2. **Create the Servlet Class:**
      - Write a Servlet that processes the **form data** submitted by the user.
      - The Servlet will override the doPost() (or doGet() depending on the form method) to handle form submissions.
      - The Servlet will **retrieve the name and age** parameters from the request object using request.getParameter("name") and request.getParameter("age").

3. **Process the Data in the Servlet:**
    - Extract the name and age values submitted from the form.
    - **Validate the input** (e.g., check if the age is a valid number).
    - Prepare a **response** that will display the user's **name** and **age** back on the browser.
4. **Send Response to the Browser:**
    - The Servlet will send a **response** to the browser containing a message like:
        - "Hello, [name]! You are [age] years old."
    - The response will be displayed to the user in the browser.
5. **Deploy the Servlet:**
    - Compile the Servlet and deploy it to a **Servlet container** (like **Apache Tomcat**).
    - Ensure the web.xml file or Servlet annotations are used to map the Servlet to the URL defined in the form's action attribute.
6. **Test the Application:**
    - Open the web browser, fill in the form with the name and age, and submit it.
    - The Servlet will process the data and display the message back to the user in the browser.

Program:

```
<!DOCTYPE html>
<html>
<head>
<title>Dragon Stone - Table Booking</title>

<style>
body {
   font-family: Arial;
   background-image: url("image.jpg");
   background-size: cover;
```

```
    background-position: center;
    color: white;
}

.container {
    width: 400px;
    margin: 80px auto;
    background: rgba(0,0,0,0.85);
    padding: 20px;
    border-radius: 10px;
    box-shadow: 0 0 10px black;
}

h2 {
    text-align: center;
    color: #ff4d4d;
}

input {
    width: 100%;
    padding: 8px;
    margin: 8px 0;
    border: none;
    border-radius: 5px;
}

button {
    width: 100%;
    padding: 10px;
    background: #ff4d4d;
    color: white;
    border: none;
    border-radius: 5px;
    cursor: pointer;
}

button:hover {
    background: #e60000;
}
</style>
</head>

<body>

<div class="container">
<h2>🍽 Book Your Table</h2>
```

```
<form action="BookingServlet" method="post">

<input type="text" name="name" placeholder="Customer Name"
required>

<input type="tel" name="mobile" placeholder="Mobile Number" required>

<input type="email" name="email" placeholder="Email" required>

<input type="date" name="date" required>

<input type="time" name="time" required>

<input type="number" name="guests" placeholder="Number of Guests"
required>

<button type="submit">Book Table</button>

</form>
</div>

</body>
</html>
```

PostServlet.java:

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import javax.servlet.annotation.WebServlet;

@WebServlet("/BookingServlet")
public class BookingServlet extends HttpServlet {

    protected void doGet(HttpServletRequest request,
                         HttpServletResponse response)
            throws ServletException, IOException {
        doPost(request, response);
    }

    protected void doPost(HttpServletRequest request,
                          HttpServletResponse response)
            throws ServletException, IOException {
```

```
        response.setContentType("text/html");
        PrintWriter out = response.getWriter();

        String name = request.getParameter("name");
        String mobile = request.getParameter("mobile");
        String email = request.getParameter("email");
        String date = request.getParameter("date");
        String time = request.getParameter("time");
        String guests = request.getParameter("guests");

        out.println("<html><body style='font-
family:Arial;background:#111;color:white;'>");

        out.println("<div style='width:500px;margin:80px
auto;background:#222;padding:20px;border-radius:10px;text-
align:center;'>");

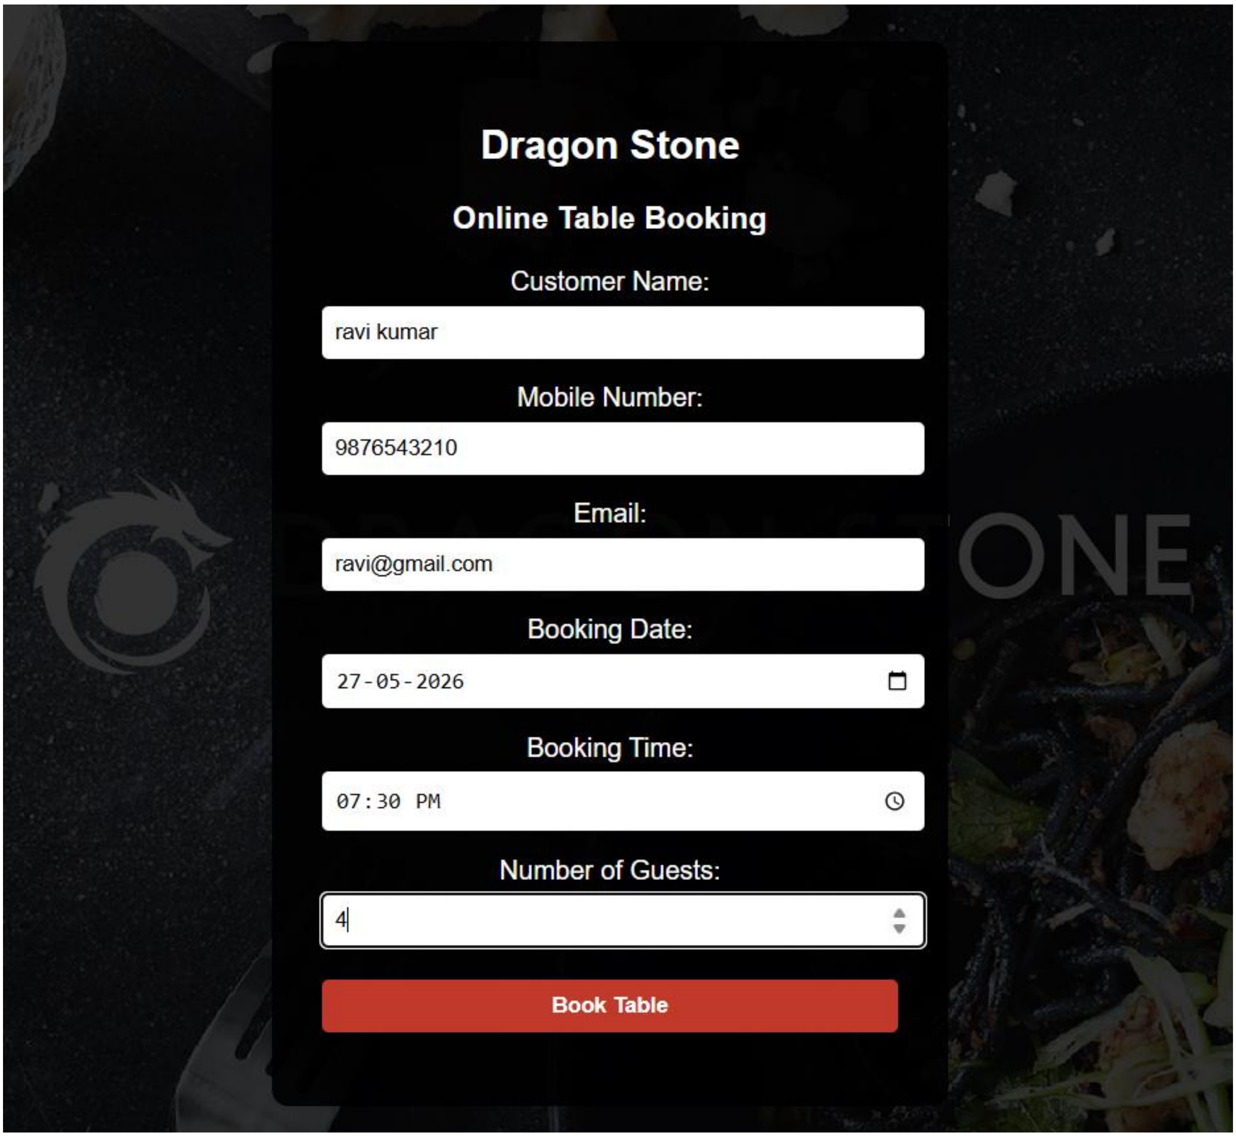
        out.println("<h2 style='color:#ff4d4d;'>🍽 Dragon Stone</h2>");
        out.println("<h3>Table Booking Confirmed!</h3>");

        out.println("<p><b>Name:</b> " + name + "</p>");
        out.println("<p><b>Mobile:</b> " + mobile + "</p>");
        out.println("<p><b>Email:</b> " + email + "</p>");
        out.println("<p><b>Date:</b> " + date + "</p>");
        out.println("<p><b>Time:</b> " + time + "</p>");
        out.println("<p><b>Guests:</b> " + guests + "</p>");

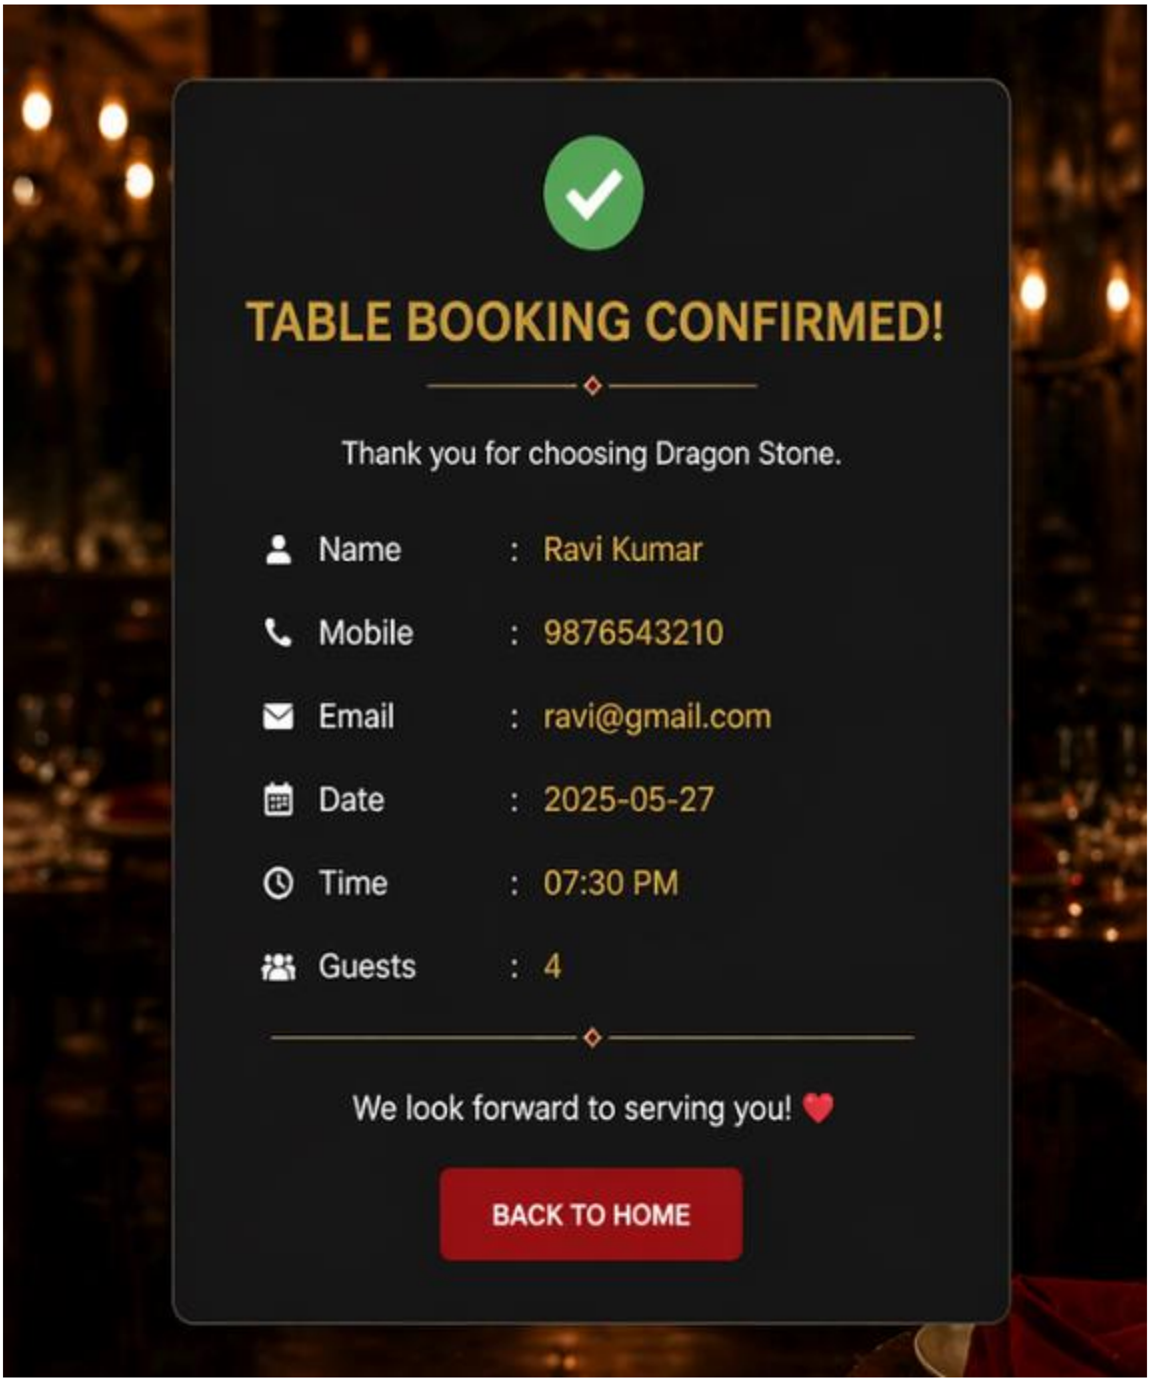
        out.println("<br><p>Thank you for choosing Dragon Stone 🍽</p>");

        out.println("</div>");
        out.println("</body></html>");
    }
}
```

Output:



Dragon Stone
Online Table Booking
Customer Name:
ravi kumar
Mobile Number:
9876543210
Email:
ravi@gmail.com
Booking Date:
27-05-2026
Booking Time:
07:30 PM
Number of Guests:
4
Book Table



RESULT:

A Servlet is created to process the HTML form data and display it back on the browser.
